

August 16, 2023

Today we are announcing our new platform for education and training for the BEST Robotics community.

[BESTedu](#) is a learning management system providing access to courses, lessons, resources and more. It will become the new home for our training calendar, workshop announcements, documentation, and lessons on a variety of topics for all our constituents (students, teachers, mentors, parents, and volunteers).

Some of the content is publicly available to anyone but most of the courses require login through the BEST National Registry. BEST students can access the system year-round and even track their progress. Students should login with their Registry student account avatar & password. If you do not yet have a student account, [find out how to get one here](#). **Remember, only PARENTS may create student accounts!**

BESTedu is still in its infancy and will continue to grow over time. It is a place to learn skills that you need, not only for the robotics competition, but beyond.

The season's training webinars have been posted and will begin next week! Be sure to check the training calendar and have your students, teachers and mentors register for each session on the link provided. You will find the calendar at <https://bestedu.bestrobotics.org/workshops/>

Introductory training for BESTedu can be found at the following link: <https://bestedu.bestrobotics.org/courses/bestedu-basics/lessons/bestedu-overview/>
